
CONTENTS

Preface	ix
1 Introduction	1
1.1 Communication networks	4
Historical perspective	4
From telephony to the Internet	6
The Web and Wikis	8
1.2 Social networks	9
Online communities	9
Traditional social networks	10
1.3 Networks everywhere	11
1.4 Organization of this book	13
2 Foundations	17
2.1 Formalities	18
Graphs and vertex degrees	18
Degree sequence	23
Subgraphs and line graphs	28
2.2 Graph representations	31
Data structures	31
Graph isomorphism	33
2.3 Connectivity	37
2.4 Drawing graphs	45
Graph embeddings	45
Planar graphs	50
3 Extensions	55
3.1 Directed graphs	57
Basics of directed graphs	57
Connectivity for directed graphs	61
3.2 Weighted graphs	65

3.3	Colorings	69
	Edge colorings	69
	Vertex colorings	71
4	Network traversal	79
4.1	Euler tours	81
	Constructing an Euler tour	82
	The Chinese postman problem	87
4.2	Hamilton cycles	92
	Properties of Hamiltonian graphs	92
	Finding a Hamilton cycle	97
	Optimal Hamilton cycles	100
5	Trees	105
5.1	Background	107
	Trees in transportation networks	107
	Trees as data structures	109
5.2	Fundamentals	112
5.3	Spanning trees	116
5.4	Routing in communication networks	119
	Dijkstra's algorithm	120
	The Bellman-Ford algorithm	123
	A note on algorithmic performance	127
6	Network analysis	131
6.1	Vertex degrees	133
	Degree distribution	134
	Degree correlations	136
6.2	Distance statistics	140
6.3	Clustering coefficient	143
	Some effects of clustering	143
	Local view	144
	Global view	146
6.4	Centrality	150
7	Random networks	155
7.1	Introduction	157
7.2	Classical random networks	158
	Degree distribution	159
	Other metrics for random graphs	162
7.3	Small worlds	166
7.4	Scale-free networks	172

Fundamentals	172
Properties of scale-free networks	178
Related networks	181
8 Modern computer networks	185
8.1 The Internet	187
Computer networks	187
Measuring the topology of the Internet	192
8.2 Peer-to-peer overlay networks	195
Structured overlay networks	196
Random overlay networks	204
8.3 The World Wide Web	212
The organization of the Web	212
Measuring the topology of the Web	214
9 Social networks	223
9.1 Social network analysis: introduction	225
Examples	225
Historical background	227
Sociograms in practice: a teacher’s aid	231
9.2 Some basic concepts	234
Centrality and prestige	234
Structural balance	240
Cohesive subgroups	246
Affiliation networks	252
9.3 Equivalence	255
Structural equivalence	255
Automorphic equivalence	258
Regular equivalence	259
Conclusions	261
Mathematical notations	267
Index	271
Bibliography	279
